

Android Developer

Are you an experimenter? Bit of a rebel? Pycom is looking for an Android developer to help completely rethink our disruptive IoT platform.

If you have a solid understanding of Android development, but need a new challenge, Pycom is the place for you.

Is Pycom where you're headed next?

Pycom is quickly becoming the world's largest IOT platform. This is your opportunity to bring your creativity and innovation to more than 100,000 companies and hackers around the globe. You will be responsible for creating disruptive code for our suite of web and mobile apps.

What you'll do

- Development of new features according to specification and project architecture
- Communication with developers and UX/UI designers
- Implementation, testing and bug hunting
- Refactoring of old features but don't worry, only occasionally

What we need from you

- Experience with programming in Java
- Knowledge of Android platform
- Ability to think independently
- Knowledge of MVVM, RxJava, Material Design, Realm, Retrofit, Google APIs is an advantage
- Experience with unit and integration testing and CI is an advantage
- Spoken and written English

Working at Pycom

- You will be part of a team of super smart, passionate experts from all over the world.
- Everyday will be spent on a disruptive product built on cutting-edge technologies.
- You will work in our ultra-cool new offices in Eindhoven, Netherlands.
- Will be challenge you to develop your existing skills and learn new ones as part of a fast-moving startup.
