

# UX/UI DESIGNER

Are you passionate about good design and user interfaces that make people go “wow, this is cool”? Do you like to take on new challenges and experiment, and do you often get it right?

You’ll be interested in this job because you’ve probably already been working on UI/UX and front-end web projects for a while and have solid understanding of how to best design and implement but you need a new challenge.

## Is Pycom where you go next?

Our DNA: a fast paced, growing IoT tech company with a great team, exciting portfolio and a fast-growing 300k+-strong community of developers and enterprises craving our solutions.

Our Customers: a growing number of developers, enterprises and education establishments in over 83 countries.

Our platform: conventional Internet of Things platforms has nothing to do with what we deliver. The Pycom Exchange which includes device management middleware, network management, IoT App Store and much more is a brand-new way to deliver IoT Services, connecting smart devices and their data to the places and people that matter.

## What you’ll do

This is an opportunity for you to use your high learning agility and meticulous attention to detail. You’ll be working with the rest of our development team to help design and build beautiful, well-thought-out features for our portals and websites.

Here’s what you may get up to:

- Brainstorm, propose & design creative solutions that could bring our product to another level.
- Help design the UI architecture (High fidelity), interface, interaction workflows, wireframes, and mockups to effectively communicate interaction and design ideas through consideration of business requirements & technical limitations.
- Develop and maintain detailed UI specifications and templates.
- Challenge us: show us how to visually improve graphic assets through better use of hierarchy, fonts, and color.

**What we need from you**

- 2 years relevant UX/UI design experience preferably from an Internet of Things or technical environment – we're growing quickly, and you'll be able to grow along with us.
- Knowledge of user behavior, research techniques and ability to preempt them in or outside our community of users.
- Fluency in best practices for web-based information architecture and design, as well as strong knowledge of usability principles and techniques.
- Experience in creating wireframes, storyboards, user flows, process flows and site maps
- High level understanding of technology and how people use it
- Design Software: Photoshop, Illustrator
- Excellent command of English and most of all passion and enthusiasm!

**Working at Pycom**

- You'll be working with a team of super smart, passionate and international people
- You'll be surrounded by a portfolio of disruptive hardware and software products
- Your place of work will be our new cool offices located in Eindhoven
- You'll be connected to a network of ecosystem partner companies from all over the world
- You'll have knowledge sharing from the best developers and entrepreneurs in the IoT industry
